Proposed subject of study for ~~research~~ on OSI H-B/3  
research.

Basic - How can sodium A or P or any other  
sleeps inducing agent be first concealed  
in a normal or common place item?

Premises - Thirst can be induced by keeping subject  
from water or giving them salty foods  
- Coffee, brandy, liquor, tea are common  
requests of a person is chilled or cold.  
- Cigarettes, cigars are almost universally  
used.

Items suggested for tests using any known sleep inducing  
agents. The effect should be about that of 6 cc of  
sodium amytal on average adult taken orally. Originally,  
the more rapid the induction of sleep the better for  
operational purposes but a delayed action (if time  
could be standardized) might also be of value.

1. Water

2. Liquor (include whiskey, brandy, vodka, schnapps<sup>gin</sup> etc.)

3. Wine

4. Beer

5. Coffee

6. Tea

7. Cocoa

8. Quinine - Cocoa (possible, cheese)

9. Ice cream

- 10 - Candy (all kinds - domestic, foreign)
- 11 Gum
- 12 Aspirin tablets
- 13 Common medicines { APC tablets, cough syrup, ointment,   
 corns, ointment, etc.
- 14 Tooth paste
- 15 Foods - in general

8 - In connection with the above a parallel study should be made of methods, techniques, (drugs, chemicals etc) that could be used to combat and counter-act these self-inducing agents.

A - In advance

B - At the same time

C - Over long periods of time

(possibly by building up internal resistance)

A

H-B/6

B/3

Reference is made to our recent  
conversations concerning matters of special  
interest to yourself and this <sup>agency</sup> ~~organization~~.

I am transmitting herewith two (2)  
memorandums which are self explanatory.

It would be appreciated if you would  
forward these memorandums to the special  
project for their consideration and action.

Will you kindly arrange that  
any material or information made available  
by the special project be forwarded to me  
at my office at your earliest possible  
convenience.

As previously discussed, the interest of  
this agency in these matters should not be  
disclosed.

Very truly yours

A/B, 4, 22/4

### POTENTIALITIES OF USE OF S.I.

While H and S.I. techniques have been known and used for a great many years, there is very little <sup>accurate</sup> information available on the specific application of these techniques to information obtaining and, military, use and proper and use. Furthermore, although we can guess at their methods, there is no accurate information on the techniques and methods used by the USSR and the satellite countries in such matters. On the 1937-38 "Puz-Turks", the ~~the~~ and ~~the~~ time etc. In addition, there are ~~no~~ few extensive works & research available in this country, specifically on the use of chemical & drugs, or gases in connection with <sup>subliminal</sup> human behavior and more particularly as a base for S.I. experiments. Hence, it appears obvious that research ~~and~~, testing and experiment along these lines must be done more or less from scratch. However,

Blackbird I & S.S. believes that the chances of success <sup>of</sup> in very advanced experimentation (see following) are good and this opinion is shared by certain individuals having expert knowledge of these techniques.

In view of the above, it is obvious that this agency <sup>will have to</sup> carry out <sup>basic and testing</sup> extensive research and considerable practical work. To date Blackbird

I 455 has engaged in entirely limited research and study, some experimentation and two operational projects. Results have been encouraging, but all individuals involved ~~were~~ recognizing the fact that considerable research, experimentation and above all basic, simple, individual practice is completely essential in the development and <sup>(teaching)</sup> of Bluebird team members. Toward this end Bluebird 1833 has set out its basic plans and its ideas for the implementation thereof above. However, what the various ultimate goals are in the air <sup>advanced</sup> and 51 techniques and what is desired from research have not as yet been set out in this report. These areas are stated ~~to be~~ immediately following in detail:

#### I. <sup>RESEARCH</sup> Research

A. <sup>Chemistry</sup> ~~Chemistry~~ - It is hoped that the entire field of ~~toxic~~ chemistry will be explored in an effort to develop new or further develop previously tried sleep inducing agents, paralysis producing agents and agents that knock down human will and inhibitions or in any way affect human behavior patterns. (This research should include narcotic drugs, chemicals, gases, glandular secretions). Research should, of course, be carried on to develop counteracting agents, antidoting agents to combat use of the above.

B. SONICS, ULTRASONICS - There is very little accurate information in this field. We hoped that research would be carried on to test the effects of "ultra-sonics" on human behavior. Countering measures must also be explored.

C. Methods of injection, delivery - 1433  
Blattind has already begun reporting information of all types on the use of the hypodermic (or related instruments). Some work has been done in connection with various gas guns but a great deal of research is necessary ~~etc~~ along this line. Liaison should be established with the

H-6/3 ~~\_\_\_\_\_~~ the  
where field of gases - particularly, radars, quick acting gases should be explored.  
(Details on the German <sup>WU-11</sup> SCHEINTOT pistol - "appearance of death" should be obtained.)

D. Sleep inducing machines - The field of mechanical <sup>and electronic</sup> aids to ~~produce~~ induce sleep or assist in ~~or~~ techniques needs full exploration. The electronic sleep inducing machines, the electroencephalograph, the various "shock" devices may eventually be adaptable for experimental action under certain circumstances.

d.  
E. Concealment of drugs in common objects - 1955  
Blutoid has previously prepared a request  
for a study of methods whereby drugs  
can be <sup>effectively</sup> concealed in common objects such as  
water, beer, coke, candy, cigarettes, gum,  
etc etc. There is impregnated many, in  
the near future, be of extreme value  
in field operations.

F. Detection of drugged individuals or  
individuals previously "conditioned" by  
SI. A division study should be  
made to ascertain methods whereby  
agents of this agency could rapidly and  
conclusively under field conditions, determine  
whether any subject was drugged or  
conditioned by enemy SI operations.

G. Collection of intelligence - 1955 Blutoid  
is supposed to receive regularly from agency  
sources all information bearing on H, SI  
and interrogation methods throughout the  
world. This information has not, in the  
opinion of 1955 Blutoid, been full enough  
either from time to time or have received  
some interrogation or SI material. It  
is hoped that research under the proposed  
plans will be more active and more  
productive than heretofore.

## II PRACTICAL EXPERIMENTATION

2 1455 Bluebird recognizes that between clinical experimentation and practical field operation there is a world of difference. In the above set out proposals under "IMPLEMENTATION", 1955

Bluebird has in general terms explained its plans for ~~training~~ training Bluebird candidates in the practical or field application of H and S1 techniques. Briefly, it is proposed to train Bluebird candidates in H and S1 work

in the US before sending them to overseas establishments. This method would ensure the overseas base that Bluebird teams sent to them would thoroughly understand H & S1 work and would have had considerable practical field work before they began operations overseas.

4 As stated many times previously and set out above under BASIC PLAN there are four (4) basic problems to be resolved. These are:

1 - 2 - 3 - 4 -

2 Bluebird believes that 1 (above) can now be answered in the affirmative using H and S1 techniques. <sup>as stated before</sup> Bluebird is not fully satisfied with results to date, but believes with continued work and study, comparable and profitable results can be obtained regularly.

3 However 2, 3 and 4 (above) are

P  
as yet unanswerable either Blackbird is of the opinion that there is a very worthwhile chance that all these many, at some future date, be answered affirmatively. This opinion is supported by a number of individuals having knowledge of these techniques and by certain literature and intelligence in this field. It is obvious that if ~~this~~ <sup>any</sup> ~~to~~ demonstrated question 2 <sup>and</sup> it can be affirmatively answered the results would be of incredible value in future operation of this system.

P set out below are a series of questions which represent, if answered affirmatively, ultimate goals in 4 and 31 techniques. These questions can only be answered by actual tests. I & SS Blackbird will conduct them <sup>exp.</sup> ~~experiment~~ for training and research purposes under controlled conditions in the U.S. The known and usable results will thereafter be applied to overseas material first for testing and then operationally.

Note - These questions have been set out in general in other reports from I & SS Blackbird to the Deputy Secretary but are restated again for matter of record.

6  
1. Can we "condition" by post-H suggestion or by any S1 technique agency employees (or persons of interest to this agency) to prevent them from giving classified information to any unauthorized source or for committing any act on behalf of a foreign or domestic enemy?

2. Can we by H or S1 techniques force a subject (unwilling or otherwise) to commit an action contrary to an individual's basic moral principles?

3. Can we by H or S1 techniques force a subject (unwilling or otherwise) to perform an act for our benefit irrespective of that subject's previous loyalty, training or background?

4. Can we by H or S1 techniques force a subject (unwilling or otherwise) to travel long distances, commit specified acts and return to us or bring to us documents or materials? Can a subject acting under H or S1 control successfully travel long distances, pass thru customs, make transfers etc? How far can a subject thus travel? Does such travel require a "reinforcement" of the control en route?

5. Can we devise a system for making unwilling subjects into willing agents and then transfer the necessary control of the subject to untrained agency personnel in the field by the use of codes, identifying signs, symbols, credentials, words etc?

6. What would be the fastest way to induce H and SI conditions (A) in a willing subject (B) in an unwilling subject (C) with drugs, (D) without drugs (E) mechanically (F) electrically?

7. Could we seize a subject and in the space of an hour or two by post H or SI control have him over an airplane, work a train, set off an explosion etc?

8. Can we devise a standard simple relatively fast technique for inducing H and SI conditions that can be used by untrained agency personnel in the field (with or without drugs, mechanical aids etc)?

9. Can we, using ~~St~~ H and S1 techniques extract complicated formulas from scientists, engineers etc if unwilling? Can we extract accurate details of <sup>movements, organization</sup> gun emplacement, <sup>landmarks</sup> fields, factories, mines <sup>etc</sup> from subjects having such special information?

10. Can we, while a subject is under ~~St~~ H and S1 control, show them a map or chart and have them point out specific items, locations, routes, buildings etc. Can we ~~also~~ have them make detailed drawings, sketches, plans (technical or otherwise)?

11. Can we use H and S1 to exhaust fatigue & produce extreme mental effort?

12. Can we guarantee total amnesia under ~~St~~ any and all conditions?

13. Can we "alter" a person's personality? Can this be made permanent? If not, could it be done deliberately for a <sup>certain</sup> short period of time?

14. Can we design tests to determine whether or not an individual has been "conditioned" by H or SI or any other method? Can H or SI conditioning be detected by use of H and SI? Could any test be developed so that ~~the~~ interested agency personnel could detect H or SI conditioning?

15. Can we force a "conditioned" subject to reveal by H and SI specifically how they were conditioned (drugs, torture, fatigue, hostage pressure etc)?

16. Is there a primitive method of breaking a post H suggestion or breaking any SI controlled operation? Is there a method of finding out what post H suggestion or SI controlled operation has been given a subject prior to its being put into effect. Can post H suggestions be changed or converted to another use by others using the same techniques?
